

Datastream 7i: Advanced Reporting

Datastream 7i Advanced Reporting, an advanced module, is a completely Web-based enterprise reporting solution that helps organizations maximize the data gathered by Datastream 7i. Datastream 7i Advanced Reporting is a complete solution, combining the power of Datastream 7i with the flexibility of Cognos ReportNet. Datastream (now Infor) has partnered with Cognos to integrate this award-winning enterprise reporting solution and provide Datastream 7i customers with the ability to create fully-customized reports that best meet specific asset management needs.

Key benefits of Datastream 7i Advanced Reporting include:

- Scalability - Datastream 7i Advanced Reporting can be deployed to just a few users and easily scales to support thousands of users. Plus the Web architecture provides anytime access to users throughout the enterprise.
- Complete User Coverage - The familiar browser-based user interface encourages user adoption, leading to increased productivity. And both the interface and level of reports can be tailored to all user levels from novice to advanced.
- Report Design - Users are in control of the report design, including report layout and conditional formatting. Multiple linked or independent queries can be assigned to each report and query layers can be separated.

Expand on the Standard Reports of Datastream 7i

Datastream 7i includes pre-defined reports including assets, materials, purchasing, scheduling, work, budget analysis, projects, and commercial services. Adding advanced reporting to Datastream 7i provides customers virtually unlimited options for creating custom reports. This single reporting system can build production reports such as invoices, statements, and statutory reports as well as the broad range of asset management and business reports that help better understand operations and make effective decisions based on data.

Simplified Custom Reports

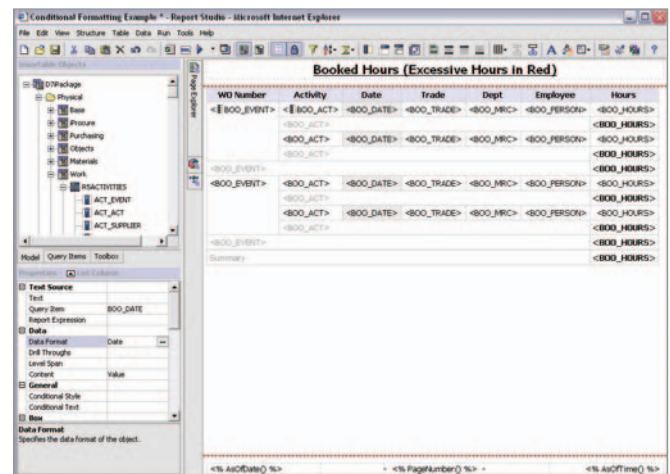

Datastream 7i Advanced Reporting includes built-in capabilities that simplify departmental and global reporting. Its advanced multilingual capabilities and localization make it easy to deploy reports in any supported language. Now global enterprises can bring together divisions, departments, and offices worldwide so they can all make decisions based on the same data.

Like Datastream 7i, the Advanced Reporting advanced module was built with every level of user in mind—from the first-time user to the advanced report author. Plus Datastream 7i Advanced Reporting is a complete enterprise reporting package, covering a variety of reporting requirements from ad hoc query, managed reports, and business reports, to invoice, statements, and bills. And, like Datastream 7i, the Advanced Reporting advanced module is a zero footprint Web-based solution, which eliminates the need to install and manage client desktop software.

The easy-to-use interface ensures Datastream 7i users can access and work with the reports they require anytime, anywhere via a Web browser. The simple graphical user interface makes building reports easy; users can create reports over the Web with minimal training and IT involvement.

Datastream 7i Advanced Reporting Features
